SPECIFIC REGULATIONS FOR PREPARING GRADUATION INTERNSHIP REPORTS USING LaTeX

Note: This section is provided for guidance only and is included in the main document using the command `\input{Regulations.tex}`. Students shall remove or comment out this command before submitting the final internship report.

I. GENERAL REQUIREMENTS

The Graduation Internship Report shall be prepared using the official LaTeX template provided by the Faculty. Students shall preserve the predefined page layout, typography, line spacing, heading styles, numbering system, figure and table formatting, and bibliography settings unless otherwise instructed by the Faculty or the supervisor.

The report shall be written in English.

Students are responsible for the academic and technical content of the report. The official LaTeX template is responsible for standardized document formatting.

II. REPORT STRUCTURE

The report shall normally be arranged in the following order:

1. Outer Cover;
2. Comments of the Internship Host Organization;
3. Supervisor's Evaluation and Graduation Internship Defense Results;
4. Table of Contents;
5. List of Symbols and Abbreviations, if applicable;
6. List of Figures;
7. List of Tables;
8. Abstract;
9. Main Chapters of the Internship Report;
10. References;
11. Appendices, if applicable.

The preliminary pages shall not be numbered as chapters. The main report content shall be organized into consecutively numbered chapters beginning with Chapter 1.

III. PAGE SIZE AND MARGINS

The report shall be formatted on A4 paper with the following margins:

Left margin:	3.5 cm
Right margin:	2.0 cm
Top margin:	2.5 cm
Bottom margin:	2.5 cm

These settings are predefined in the official template and shall not be modified by students.

IV. FONT, FONT SIZE, AND LINE SPACING

The main text shall use a 13 pt font size with 1.3-line spacing. A Times-family typeface shall be used in accordance with the official template.

The text shall be fully justified.

Students shall not use repeated spaces, repeated manual line breaks, or multiple blank lines to position text. Paragraph and heading spacing shall be controlled by the template.

V. OUTER COVER

The outer cover shall follow the official format provided in the template and shall contain the following information:

- Thai Nguyen University of Technology;
- Faculty of International Training;
- Engineering and Technology Department;
- University logo and Faculty logo;
- the title **INTERNSHIP REPORT**;
- Internship Organization;
- Author;
- Class;
- Supervisor;
- place and year of completion.

Students shall only replace the required information fields and shall not modify the cover-page layout unless instructed otherwise.

VI. COMMENTS OF THE INTERNSHIP HOST ORGANIZATION

The page entitled **COMMENTS OF THE INTERNSHIP HOST ORGANIZATION** is reserved for the internship host organization.

It includes:

- the student's full name;
- class;
- comments from the host organization;
- score;
- date;
- signature and official seal.

Students shall not alter or complete official evaluation fields unless specifically authorized.

VII. SUPERVISOR'S EVALUATION AND DEFENSE RESULTS

The section entitled **SUPERVISOR'S EVALUATION AND GRADUATION INTERNSHIP DEFENSE RESULTS** is reserved for the supervisor and defense committee.

The evaluation may include:

- Internship Progress and Student's Attitude;
- Report Content;
- Report Presentation;
- Other Comments;
- Supervisor's Opinion;
- Defense Result;
- Score.

Students shall not enter evaluation scores or defense results before they are officially determined.

VIII. CHAPTERS, SECTIONS, AND SUBSECTIONS

The report structure shall be generated using the standard LaTeX commands:

```
\chapter{...}
\section{...}
\subsection{...}
```

Chapter, section, and subsection numbers shall be generated automatically by LaTeX.

Students shall not manually type chapter or section numbers and shall not reproduce heading styles using commands such as `\textbf`, `\fontsize`, or `\centering` instead of the appropriate structural command.

Excessive subdivision should be avoided. In most cases, the hierarchy Chapter–Section–Subsection is sufficient.

IX. ORGANIZATION OF THE MAIN CONTENT

The specific content of the report shall depend on the internship organization and the assigned tasks. A typical structure may include:

- **Chapter 1. Overview of the Internship Organization**;
- **Chapter 2. Internship Activities and Assigned Tasks**;
- **Chapter 3. Results, Experience, and Evaluation**.

These chapter titles are recommendations only and may be adapted to the actual internship content.

The report shall reflect work actually performed, observed, analyzed, or learned during the internship. Unrelated theoretical material should not be included merely to increase report length.

X. TABLE OF CONTENTS

The Table of Contents shall be generated automatically using:

```
\tableofcontents
```

Students shall not create or manually edit page numbers in the Table of Contents.

The document shall be compiled sufficiently to ensure that all page numbers and entries are correctly updated.

XI. LIST OF SYMBOLS AND ABBREVIATIONS

Symbols and abbreviations that are used repeatedly in the report shall be listed in the **List of Symbols and Abbreviations**.

The list may contain the following columns:

No. Symbol / Abbreviation Unit Definition

Only symbols and abbreviations actually used in the final report shall be retained. Example entries contained in the template shall be removed if they are not relevant to the student's report.

Each abbreviation should normally be defined when it first appears in the main text.

XII. FIGURES, DIAGRAMS, AND PHOTOGRAPHS

Figures shall be clear, legible, and directly relevant to the report content.

Figures shall be inserted using the standard `figure` environment.

Example:

```
\begin{figure}[H]
    \centering
    \includegraphics[width=0.8\textwidth]
                    {figures/company_structure.pdf}
    \caption{Organizational structure of the company}
    \label{fig:company-structure}
\end{figure}
```

Figure captions shall be placed below the figure.

Each referenced figure shall have a unique `\label` and shall be referenced in the text using, for example:

```
Figure~\ref{fig:company-structure}
```

Students shall not manually type figure numbers.

Figures reproduced or adapted from external sources shall include an appropriate citation.

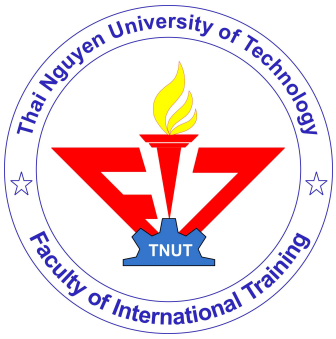

Photographs taken during the internship shall be relevant and sufficiently clear. Students shall not include confidential, restricted, or proprietary information without permission from the internship organization.

Vector graphics or high-resolution images are recommended whenever possible.

Rendered examples

The following examples show how source code becomes visible in the compiled report. Captions remain below figures, and references use the generated figure number.

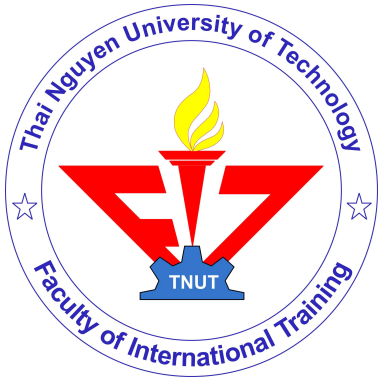

Example. A single figure:

Example image: internship documentation

Two figures side by side

Example. A visual comparison:

(a) Organization example

(b) Faculty example

Example pair: two related internship figures

Source code for the pair:

```
\begin{figure}[H]
    \centering
    \begin{minipage}{0.48\textwidth}
        \centering
        \includegraphics[width=\linewidth]{figures/fit.jpg}
        \par\smallskip (a) Organization example
    \end{minipage}\hfill
    \begin{minipage}{0.48\textwidth}
        \centering
        \includegraphics[width=\linewidth]{figures/tnut.jpg}
        \par\smallskip (b) Faculty example
    \end{minipage}
    \caption{Comparison of two internship figures}
    \label{fig:internship-comparison}
\end{figure}
```

Wide or full-page figures

A detailed figure may use the full text width or a dedicated page when its labels cannot be read at a smaller size.

Example. Dedicated-page visual:

Example: a figure given a dedicated page

Source code for a wide figure:

```
\begin{figure}[p]
    \centering
    \includegraphics[width=\textwidth,height=0.68\textheight,
                     keepaspectratio]{figures/tnut.jpg}
    \caption{Internship figure shown on a wide page}
    \label{fig:wide-internship}
\end{figure}
```

XIII. TABLES

Tables shall be created using suitable LaTeX environments such as `table`, `tabular`, `tabularx`, or `longtable`.

Table captions shall be placed above the table.

Example:

```
\begin{table}[H]
    \centering
    \caption{Internship schedule}
    \label{tab:internship-schedule}

    \begin{tabular}{lll}
        \toprule
        Week & Task & Result \\
        \midrule
        1 & Orientation & Completed \\
        2 & System study & Completed \\
        \bottomrule
    \end{tabular}
\end{table}
```

Tables shall be referenced using:

```
Table~\ref{tab:internship-schedule}
```

Students shall not manually type table numbers.

Tables should be created directly in LaTeX rather than inserted as screenshots whenever practical.

Rendered short table

Example. The compiled table appears directly in the report:

Internship schedule

Week	Task	Result
1	Orientation	Completed
2	System study	Completed
3	Assigned task	In progress

Long tables spanning pages

Use `longtable` when the schedule or measurement record continues onto another page. The heading between `\endfirsthead` and `\endhead` is repeated on every continuation page.

Example. Rendered long table:

Example: internship measurements across tests

Test	Condition	Value
01	Initial inspection	12.4
02	Initial inspection	12.7
03	System study	11.9
04	System study	12.0
05	Task A	13.1
06	Task A	13.0
07	Task B	12.5
08	Task B	12.6
09	Review	11.8
10	Review	11.9
11	Validation	13.2
12	Validation	13.1
13	Initial inspection	12.4
14	Initial inspection	12.5
15	System study	11.7
16	System study	11.9
17	Task A	13.0
18	Task A	13.2
19	Task B	12.6
20	Task B	12.5
21	Review	11.8
22	Review	11.9
23	Validation	13.1
24	Validation	13.2
25	Initial inspection	12.4
26	Initial inspection	12.6
27	System study	11.8
28	System study	11.9
29	Task A	13.1
30	Task A	13.0
31	Task B	12.5
32	Task B	12.7
33	Review	11.7
34	Review	12.0
35	Validation	13.2
36	Validation	13.1

Internship measurements (continued)

Test	Condition	Value
37	Initial inspection	12.4
38	Initial inspection	12.5
39	System study	11.8
40	System study	11.9
41	Task A	13.1
42	Task A	13.0
43	Task B	12.5
44	Task B	12.6
45	Review	11.8
46	Review	11.9
47	Validation	13.2
48	Validation	13.1
49	Initial inspection	12.4
50	Initial inspection	12.6
51	System study	11.7
52	System study	11.9
53	Task A	13.0
54	Task A	13.2
55	Task B	12.6
56	Task B	12.5
57	Review	11.8
58	Review	11.9
59	Validation	13.1
60	Validation	13.2

Source code for a multi-page table:

```
\begin{longtable}{|c|l|r|}
\caption{Measurements across internship tests}\label{tab:internship-measurements}\\
\hline
\textbf{Test} & \textbf{Condition} & \textbf{Value} \\
\hline
\endfirsthead
\multicolumn{3}{l}{\textit{Measurements (continued)}}\\
\hline
\textbf{Test} & \textbf{Condition} & \textbf{Value} \\
\hline
\endhead
01 & Initial inspection & 12.4 \\
02 & Initial inspection & 12.7 \\
% Continue rows in the same format.
\end{longtable}
```

Wide tables

When a table has many columns, shorten headings or wrap text first. If it remains wider than the margins, use `adjustbox` to constrain it to `\textwidth` while keeping the content readable.

Example. Rendered wide table:

Task	Hours	Score	Tests	Issues	Status
Orientation	8	9.0	2	0	Complete
System study	16	8.5	4	1	Complete
Assigned task	32	8.8	8	2	Review

Source code for the wide table:

```
\begin{table}[H]
    \centering
    \caption{Wide internship task summary}
    \label{tab:wide-internship}
    \begin{adjustbox}{max width=\textwidth}
        \begin{tabular}{lrrrrl}
            Task & Hours & Score & Tests & Issues & Status \\
            Orientation & 8 & 9.0 & 2 & 0 & Complete \\
            System study & 16 & 8.5 & 4 & 1 & Complete \\
            Assigned task & 32 & 8.8 & 8 & 2 & Review \\
        \end{tabular}
    \end{adjustbox}
\end{table}
```

XIV. EQUATIONS AND TECHNICAL QUANTITIES

Mathematical expressions shall be typeset directly using LaTeX. Images or screenshots of equations shall not be used.

Short expressions may be written in inline mathematical mode, for example:

```
$R = 0.7\,\Omega$
```

Important equations shall use a numbered equation environment.

Example:

```
\begin{equation}
    P = UI
    \label{eq:power}
\end{equation}
```

Equations shall be referenced using:

```
Equation~\eqref{eq:power}
```

Equation numbers shall not be manually entered.

SI units shall be used wherever applicable. The `siunitx` package should be used where appropriate.

Examples:

```
\SI{220}{\volt}
\SI{50}{\hertz}
\SI{2.5}{\ampere}
```

Notation and units shall be consistent throughout the report.

Example. Rendered inline quantity: the measured resistance is $R = 0.7\,\Omega$.

Example. Rendered display equation:

$$P = UI$$

Use a numbered equation in the report when it must be referenced later:

```
\begin{equation}
    P = UI
    \label{eq:internship-power}
\end{equation}
```

Rendered quantities with units:

Supply voltage: 220 V
Current: 2.5 A
Frequency: 50 Hz

Source code:

```
\SI{220}{\volt}
\SI{2.5}{\ampere}
\SI{50}{\hertz}
```

XV. SOURCE CODE

If the internship involves programming, PLCs, microcontrollers, simulation, or software development, relevant source code may be included in the report.

Source code shall be presented using the `listings` environment or another environment defined by the official template.

Example:

```
\begin{lstlisting}[language=st]
IF Start = TRUE THEN
    Motor := TRUE;
ELSE
    Motor := FALSE;
END_IF;
\end{lstlisting}
```

Only code necessary for explaining the work should appear in the main report. Long source-code listings should be moved to an appendix or submitted as supplementary files if required.

Source code should not normally be inserted as screenshots.

Appendix examples: verbatim and listings

The `verbatim` environment preserves literal text:

```
controller: enabled
sampling time: 0.01 s
status: verified
```

Use `lstlisting` for source code with formatting:

```
gain = 2.5;
output = gain * input;
fprintf('Output: %.2f\n', output);
```

Source code for the listing:

```
\begin{lstlisting}[language=Matlab]
gain = 2.5;
output = gain * input;
fprintf('Output: %.2f\n', output);
\end{lstlisting}
```

XVI. ABSTRACT

The Abstract shall briefly summarize:

- the internship organization;
- the objectives of the internship;
- the main tasks performed;
- the main results, knowledge, and skills obtained.

The Abstract should be concise and should not reproduce the full content of the report chapter by chapter.

XVII. REFERENCES AND CITATIONS

All books, journal papers, conference papers, standards, websites, datasheets, manuals, technical documents, figures, tables, or other external sources used in preparing the report shall be properly cited.

References shall be managed through the bibliography system provided with the official template.

Bibliographic entries shall normally be stored in:

```
References.bib
```

References shall be cited in the report using:

```
\cite{reference-key}
```

Students shall not manually type reference numbers such as “[1]”, “[2]”, etc.

Titles of foreign-language publications shall remain in their original language in the bibliography.

All borrowed ideas, data, figures, tables, equations, methods, or results shall be properly acknowledged.

What a citation and reference-list entry look like

A numeric citation may render as follows:

The internship method follows an established procedure [1].

The bracketed number is generated by the bibliography style. Store the source in `References.bib` and cite it with:

```
The internship method follows an established procedure
\cite{author2024internship}.
```

A reference-list entry may render as:

[1] A. Author, “Internship Method,”*Technical Report*, 2024.

A BibTeX entry can be organized as follows:

```
@techreport{author2024internship,
  author      = {Author, First},
  title       = {Internship Method},
  institution = {Example Organization},
  year        = {2024}
}
```

XVIII. CROSS-REFERENCING

Numbered elements shall be cross-referenced using the standard LaTeX mechanism.

Use the following commands where appropriate:

```
\label{...}
\ref{...}
\eqref{...}
```

For example:

```
As shown in Figure~\ref{fig:system}, ...
```

Students shall not manually type numbers such as “Figure 2.3” when those numbers can be generated automatically.

What cross-references look like

After compilation, a sentence may appear as follows:

> Figure 2.3 shows the internship workflow. The test conditions are listed in Table 2.1, and the model is defined by Equation (2.4).

The numbers above are visual examples. Labels and reference commands generate the actual numbers when the report is compiled.

Source code:

```
Figure~\ref{fig:internship-workflow} shows the internship workflow.
The test conditions are listed in Table~\ref{tab:internship-tests},
and the model is defined by Equation~\eqref{eq:internship-model}.
```

Place each `\label` after the command that creates its number, usually immediately after `\caption` for figures and tables. Use descriptive prefixes such as `fig:`, `tab:`, and `eq:` so labels remain easy to maintain.

XIX. PAGE NUMBERING

Cover pages and official evaluation forms at the beginning of the report shall not display page numbers.

The main body of the report shall use Arabic page numbers beginning from Chapter 1.

Page numbering shall be generated automatically by the official template. Students shall not manually enter page numbers.

XX. PROJECT FILE ORGANIZATION

Students should maintain a clear and organized LaTeX project structure. A recommended structure is:

```
InternshipReport/
|
|-- main.tex
|-- References.bib
|
|-- figures/
|   |-- company.pdf
|   |-- system.png
|   `-- ...
|
`-- chapters/
    |-- chapter1.tex
    |-- chapter2.tex
    `-- chapter3.tex
```

Figures should normally be stored in the `figures` directory specified by the official template.

File and directory names should preferably contain Latin letters, numbers, hyphens, or underscores.

Recommended examples include:

```
company_structure.pdf
motor_control.png
chapter_01.tex
```

Spaces and unnecessary special characters in file names should be avoided where possible.

XXI. DOCUMENT COMPILATION AND FINAL CHECK

Before submission, the complete LaTeX project shall compile successfully and produce the final PDF report.

The final document shall not contain unresolved references such as:

```
??
[?]
```

Before generating the final PDF, students shall check:

- the Table of Contents;
- page numbering;
- chapter, section, and subsection numbering;
- figure numbering;
- table numbering;
- equation numbering;
- cross-references;
- citations;
- bibliography;
- font display;
- mathematical symbols;
- image quality;
- completeness of all required forms.

The document may be compiled using TeX Live, MiKTeX, or another compatible LaTeX environment. Regardless of the compilation environment, the resulting PDF shall conform to the official Faculty template.

XXII. CONTENT THAT STUDENTS MAY EDIT

Students may edit or replace:

- student name;
- class;
- internship organization;
- supervisor name;
- Abstract;
- List of Symbols and Abbreviations;
- chapter titles and chapter content;
- figures and photographs;
- tables;
- equations;
- citations and references.

Students shall not modify the main document formatting settings in the preamble, including the document class, page geometry, line spacing, heading formatting, table-of-contents formatting, font configuration, page layout, or cover-page macros unless specifically instructed.

XXIII. FINAL SUBMISSION REQUIREMENTS

Before submission, the final report shall:

- compile without errors that affect the report content or presentation;
- contain all required forms and report sections;
- contain correct student, class, internship organization, and supervisor information;
- contain an updated Table of Contents, List of Figures, and List of Tables;
- contain no unused example content from the template;
- contain no placeholder text such as *Title of Chapter 1*, *Section 1.1*, or other sample entries;
- contain all required citations and references;
- contain no unresolved cross-references.

If the Faculty requires submission of the LaTeX source, the complete project shall include all `.tex` files, the bibliography database, figures, and any other files required to reproduce the submitted PDF.

Important: Before submitting the final internship report, students shall remove or comment out the following command in the main document:

```
\input{Regulations.tex}
```

For example:

```
% \input{Regulations.tex}
```

This removes the guidance pages from the final submitted report while preserving the regulations file in the LaTeX project for reference.
